

eASEE Version 3.6 for globally networked development teams

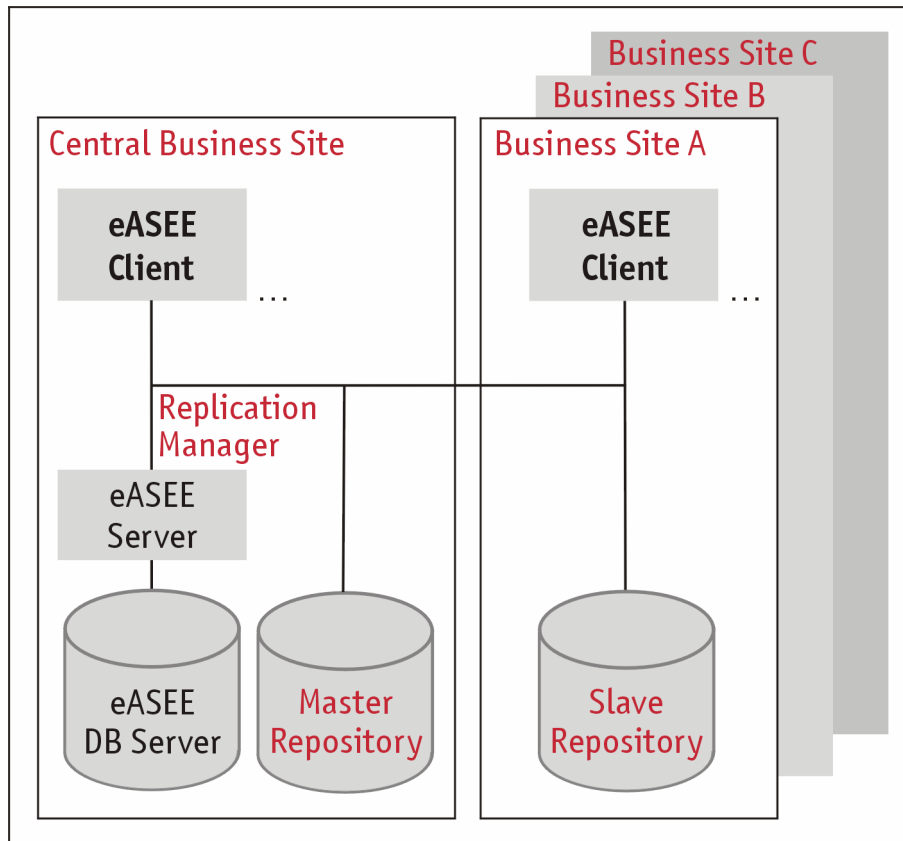

Data and process management tool from Vector optimizes development processes by global data transfer

Stuttgart, 12/03/2007 – The new version of eASEE from Vector makes it easier for users to manage process and development data across multiple business sites. A new security and roles approach structures controlled access to the data of networked work groups.

Growing globalization is accompanied by a continual rise in the number of a company's development sites as well. That is why eASEE 3.6 takes a decentralized approach to distributing all process and development data across multiple business sites. The combination of a global database server and local data storage enhances the speed and capacity of existing systems. Regular data transfer to the central business site provides an additional backup function.

Data management has also been made more flexible by advanced development of its security approach. Differentiated roles and rights management regulates what users see and their access to development data. That is how eASEE supports management of development activities at automotive OEMs and Tier-1 suppliers, with the goal of sustained implementation of development processes on a global level.

About Vector Informatik GmbH (Revised: 12/01/2007):

Vector Informatik is the leading producer of software tools and components for networking in electronic systems based on CAN, LIN, FlexRay and MOST as well as a number of CAN-based protocols.

This know-how is conveyed in the form of products or as a comprehensive consultation package with system and software engineering. Workshops and seminars round out our multifaceted training program.

Worldwide customers in the automotive, heavy-duty vehicle, transport and control engineering fields rely on solutions and products from the independently-owned Vector Group.

Vector Informatik, founded in 1988, currently employs 770 people together with Vector Consulting GmbH and in the year 2006 achieved sales of 105 million euros. In addition to its headquarters in Stuttgart, Vector Informatik also has an international presence with subsidiaries in the USA, Japan, France, Sweden, and the Republic of Korea.
